Course Description

This full-day end-user program will allow you to understand the use of fall protection as it relates to what you do at heights. Various fall protection options exist; this course will identify which options may best meet your needs and give you the tools and knowledge to work at heights safely.

The course material is energetically delivered and includes hands-on activities and video analysis, and focuses on student participation. The course is delivered by one of our highly qualified instructors.

This course is delivered to meet a specific jurisdiction's regulations. Using our online endorsement service, students who possess a valid certification may register for and purchase lessons to add jurisdiction endorsements. These lessons will provide you with knowledge required for a selected jurisdiction. You can add multiple jurisdictional endorsements to your fall protection certification. This endorsement system allows for increased knowledge and aids in worker mobility while reducing redundancy in training.
